## **Letter to the community**

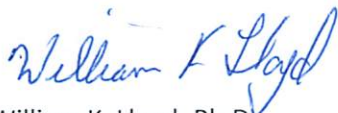

Dear Uniondale Union Free School District Community:

The Nassau County Department of Health has contacted the Uniondale Union Free School District to advise that an individual in the high school has been diagnosed with tuberculosis (TB). This individual is no longer on school grounds.

The Uniondale Union Free School District is working closely with the Nassau County Department of Health to identify students and staff who may have been in close and prolonged contact with this individual. Those staff, students and their parents are being notified in a separate letter detailing further information and recommended testing.

If you have not been notified that you or your child was identified as having had **close and prolonged** contact with the individual with TB, the Nassau County Department of Health has indicated that you do not need a screening test. You may discuss your child's situation with your health care provider, who may be able to offer additional advice.

The health, safety and welfare of our students, faculty, staff and all who visit our schools is our highest priority. For further information on TB, please visit the Center for Disease Control's website: [www.cdc.gov/tb](http://www.cdc.gov/tb).

William K. Lloyd, Ph.D.  
Superintendent of Schools
