**RE: Lead Drinking Water Sampling  
Prince George Public Schools  
Moore Middle School  
Project No.: ENRI190006.03**

Dear Ms. Munford:

The EI Group, Inc (EI) was contracted to perform drinking water sampling at the following building:

- Moore Middle School 11455 Prince George Dr., Disputanta, VA 23842

This survey was performed by Ms. Holly Monger, an Industrial Hygienist for EI, on May 10, 2019. The purpose of this assessment was to resample the lab eyewash stations for the above building, which contained four (4) lead samples in excess of the regulated levels following a previous analysis on April 19, 2019.

During the assessment, four (4) samples were collected from emergency eyewash stations. The samples were sealed in their own plastic jars and delivered on the day of the survey to Environmental Hazards Services, LLC (EHS) in Richmond, Virginia. EHS is accredited by the Virginia Environmental Laboratory Accreditation Program (VELAP) for Drinking Water (VELAP ID 460172).

Sample results indicated lead content for the samples were below regulatory limits, with the exception of two (2) samples from eyewash stations location in B Wing Room 115 and A Wing Room A15. See Table 1: Eyewash Water Sampling Results, below for the specific sampling locations and results.

## Procedures and Standards

Lead is a toxic metal that is detrimental to human health. There is no known value of lead for the human body. Lead can remain in the bloodstream and bodily organs for up to a few months. Any amount of lead that is not excreted is absorbed into the bones, where it will collect indefinitely. Young children, 6 years of age and younger are at high risk for lead exposure due to frequent hand-to-mouth activity, and because their nervous systems are still undergoing development. There is currently no safe blood lead level for children, and the degree of harm from lead exposure can vary due to a number of factors such as the frequency, duration, and dose of exposure.

On the day of the survey, EI collected water samples in 250 mL plastic bottles at second draw (follow-up flush). First draw refers to collecting a water sample after the water has been sitting in the pipes for at least 8 hours, and no longer than 18 hours prior to sampling. Follow-up flush refers to collecting a water sample after letting the water run at a pencil width for 30 seconds.

## Sample Results

The water sampling was conducted by the EI Group on May 10, 2019. The samples were submitted to EHS in Chesterfield, Virginia for analysis using the EPA recommended method SM 3113B-2010. EHS participates in the NELAC Accreditation Program, and the VA Environmental Laboratory Accreditation program (VELAP) for drinking water (VELAP ID 460172). Table 1 below presents the results of the water samples analyzed by EHS on fixtures that were known and accessible to EI during the survey. The laboratory reports are attached in the Appendices.

Table 1: Lead Water Sampling Results Moore Middle School – Prince George County Schools Survey Date: May 10, 2019			
Sample No.	Sample Location	Result (ppb)	Exceedance
<b>MM-1</b>	<b>B Wing Room 115 Eyewash Station</b>	<b>17.1</b>	<b>YES</b>
<b>MM-2</b>	<b>A Wing Room A15 Eyewash Station</b>	<b>196</b>	<b>YES</b>
MM-3	Room C11 Eyewash Station	4.84	NO
MM-4	Room C12 Eyewash Station	6.01	NO

ug/L = ppb  
 ug/L = micrograms per liter ppb = Parts Per Billion  
 EPA – Maximum Contaminant Level for Lead in Drinking Water – 15 ppb  
**BOLD** = Exceedance of EPA Limit

## Recommendations

Sample analysis indicated that high lead levels were found at the B Wing Room 115 Eyewash Station and the A Wing Room A15 Eyewash Station. It is important to note that variations in lead concentration may be found among individual outlets in a building due to differences in the flow rates of those outlets, or the building materials used. As long as the eyewash stations are not used for drinking or cooking, EI does not recommend any further action. It is recommended that the eyewash stations be flushed based on the manufacturer's instructions, which usually consist of flushing the eyewash station weekly to monthly. This is important to protect individuals against hazards associated with chemical or biological exposure during emergency situations.

## Disclaimer

This inspection and report is written for and intended for the use of Prince George Public Schools and their clients only. EI will not be held liable for any interpretations made, opinions formed, or conclusions drawn by any third party as a result of examining the lab results, inspection results or this report. Any interpretations, opinions, and conclusions will be those made, formed, and drawn solely by that third party.

We have endeavored to complete the services identified herein in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality and under similar conditions at this project. Should conditions change, future sampling may need to be conducted. No other representation, express or implied, is included or intended, and no warranty or guarantee is included or intended in this agreement, or any report, opinion, document, or other instrument of service.

EI appreciates the opportunity to provide these environmental services for Prince George Public Schools. Please feel free to call us at (804) 320-9300 if you have any questions or are in need of further assistance.

Sincerely,

### **The EI Group, Inc**
