

Push Notifications vs. Emergency Notifications with the District App

Push Notifications- District App must be installed on a device to receive.

Messages are pushed through the App and a district logo  will appear in the notification section of the device once received. User can turn on/off and select type of push notification in settings. Types of messages to expect via push notification are: reminders, upcoming events, and notices to look at a particular Feed in the App.

* Push notifications are not automatically sent when Feeds are updated, so please keep looking in Feeds for new pictures and content.

Emergency Notifications- Installation of the App is not required. Messages are sent via text. When a text is received, the ID will indicate 98901. This contact number can be saved for future identification but is not required. Types of messages to expect with emergency notifications are: school closing, delayed opening, early dismissal, and important bulletins.
