

Math Department Curriculum Map Template, 2018-19

Subject: Algebra A sheltered/core

Textbook: McGraw Hill (Glencoe) 2018 Edition and Emathinstruction Algebra I

Marking Periods	Unit Title (Big Idea/Major Focus)	Topics/Skills	Evidence of Learning (Assessments)	Resources (texts, online tools, etc.)
<p>Marking Period 1</p>	<p>1 - Building blocks of Algebra</p> <p>Enduring Understanding:</p> <ul style="list-style-type: none"> There is meaning to the structure of an expression. Different number sets may be more appropriate than others given the context of a situation. The product of two irrational numbers is NOT always irrational. <p>Essential Questions:</p> <ul style="list-style-type: none"> Is a number just a number? How do we use the properties of real numbers to manipulate expressions? How do we translate english into mathematics - and why would we do it? 	<p><u>Real Numbers</u></p> <ul style="list-style-type: none"> Classifying Real Numbers (Rational vs. Irrational and the Real Number System) Properties of Real Numbers (commutative, associative, distributive, zero product, inverses, identities, properties of equality) <p><u>Variables and Expressions</u> (algebraic and verbal representations)</p> <ul style="list-style-type: none"> Evaluating expressions <ul style="list-style-type: none"> Order of operations Substitution Using the graphing calculator Simplifying expressions - combining like terms Translating English to Algebraic Expressions and vice versa <p><u>*Rates</u></p> <ul style="list-style-type: none"> Conversions, speed, using rate <p>Vocabulary: <i>Commutative, Associative, Distributive, Zero product, additive/multiplicative identity, additive/multiplicative inverse, simplify, evaluate, combine, variable, expression, equation, coefficient, exponent, PEMDAS, reciprocal, substitution, more than, less than, equivalence, structure, rate, proportion,</i></p>	<ul style="list-style-type: none"> <input type="checkbox"/> Pre-Assessment Check <input type="checkbox"/> Performance Tasks <input type="checkbox"/> Quizzes <input type="checkbox"/> Castle Learning <input type="checkbox"/> Exit Tickets <input type="checkbox"/> Do Nows <input type="checkbox"/> Class Discussion <input type="checkbox"/> Daily Handouts <input type="checkbox"/> Unit Review and Re-engagement Activities <input type="checkbox"/> Unit Exam 	<p>EMathinstruction.com Unit #1 McGraw Hill 2018 - Chapter 0, Chapter 1</p> <ul style="list-style-type: none"> Jmap.org Mathbits.com Engageny.org Bigideasmath.com Problem Attic Kuta Software Castle Learning Delta Math
<p>Marking Period 2</p>	<p>2 - One Variable Equations and Inequalities</p> <p>Enduring Understanding:</p> <ul style="list-style-type: none"> A solution set makes an equation or inequality true Equations or inequalities can be represented in multiple and equivalent ways <p>Essential Questions:</p> <ul style="list-style-type: none"> Is an equation always true? What are the similarities and differences of equations and inequalities? Can the solution to an equation be something other than a number? How can expressions, equations and inequalities be transformed to find solutions? 	<p><u>Equations in one variable</u> (algebraic and verbal representations)</p> <ul style="list-style-type: none"> Solving Equations in one variable <ul style="list-style-type: none"> Two-step, multi-step (and checking solutions) Fractions/Decimals (and checking solutions) Variables on both sides (and checking solutions) Alternative Solutions (infinite and no solution) Literal Equations Translating English to Algebraic equations and vice versa <p><u>Inequalities in one variable</u></p> <ul style="list-style-type: none"> Comparing equations to inequalities (one solution vs. infinite) Express solution set of inequalities AND compound inequalities <ul style="list-style-type: none"> Algebraically, Verbally Graphically/number line (open vs. closed circle) set builder/*interval notation Solving inequalities <ul style="list-style-type: none"> Comparing solving equations to inequalities Solving multi-step inequalities (and checking possible solution) Variables on both sides (and checking possible solutions) Translating English to Algebraic equations and vice versa <p>Vocabulary: <i>sum, difference, product, quotient, total, is less than, is greater than, equal to, not equal to, maximum, minimum, at least, at most, included, excluded, solution,</i></p>	<ul style="list-style-type: none"> <input type="checkbox"/> Pre-Assessment Check <input type="checkbox"/> Performance Tasks <input type="checkbox"/> Quizzes <input type="checkbox"/> Castle Learning <input type="checkbox"/> Exit Tickets <input type="checkbox"/> Do Nows <input type="checkbox"/> Class Discussion <input type="checkbox"/> Daily Handouts <input type="checkbox"/> Unit Review and Re-engagement Activities <input type="checkbox"/> Unit Exam 	<p>EMathinstruction.com Unit #2 McGraw Hill 2018 - Chapter 2, Chapter 5</p> <p>Online Resources:</p> <ul style="list-style-type: none"> Jmap.org Mathbits.com Engageny.org Bigideasmath.com Problem Attic Kuta Software Castle Learning Delta Math

		<p><i>infinite solutions, set builder notation, interval, interval notation, manipulation, isolate</i></p>		
<p>Marking Period 3</p>	<p>3 - Functions</p> <p>Enduring Understanding:</p> <ul style="list-style-type: none"> • Functions can be represented in multiple, equivalent ways • Function rules describe the quantitative relationship between variables <p>Essential Questions:</p> <ul style="list-style-type: none"> • How do we measure change? • Are all equations functions? Can you solve a function? • Can an input have multiple outputs? 	<p><u>Relations</u></p> <ul style="list-style-type: none"> • Define a relation • Identify and state Domain and Range from a graph, set, table, or mapping using set-builder notation (<i>*interval notation</i>) • Rate of Change <ul style="list-style-type: none"> ◦ Calculate the rate of change given a rule, graph, table ◦ Comparing rates given table, rule, or graph <p><u>Functions</u></p> <ul style="list-style-type: none"> • Define a function • Determine if a relation is a function from a table, rule (emphasize $y=$ in graphing calculator), graph (vertical line test), set, mapping diagrams • Matching and comparing between different representations. • Function Notation and Evaluate a function algebraically, graphically and from a table or set (linear/absolute value/exponential/quadratic/square root). • Interpreting a graph in context of a real world situation <ul style="list-style-type: none"> ◦ Increasing, decreasing, rate of change • Determine most appropriate domain from real number system given real word context. <p>Vocabulary: <i>relation, functions, input, output, domain, range, vertical line test, coordinate plane, linear, absolute value, exponential, quadratic, square root, function notation, mapping diagram,</i></p>	<ul style="list-style-type: none"> <input type="checkbox"/> Pre-Assessment Check <input type="checkbox"/> Performance Tasks <input type="checkbox"/> Quizzes <input type="checkbox"/> Castle Learning <input type="checkbox"/> Exit Tickets <input type="checkbox"/> Do Nows <input type="checkbox"/> Class Discussion <input type="checkbox"/> Daily Handouts <input type="checkbox"/> Unit Review and Re-engagement Activities <input type="checkbox"/> Unit Exam 	<p>EMathinstruction.com Unit #3 McGraw Hill 2018 - Chapter 1, Chapter 3</p> <ul style="list-style-type: none"> • Jmap.org • Mathbits.com • Engageny.org • Bigideasmath.com • Problem Attic • Kuta Software • Castle Learning • Delta Math
	<p>4 - Linear Functions and Inequalities</p> <p>Enduring Understanding:</p> <ul style="list-style-type: none"> • A constant rate of change distinguishes a linear function from other functions. • Linear functions can be used to make predictions in real world situations. <p>Essential Questions:</p> <ul style="list-style-type: none"> • Why are lines straight? • Where do lines begin? • What real world situations can be modeled by linear functions? 	<p><u>Linear Functions</u></p> <ul style="list-style-type: none"> • Define linear function and identify the features of the function for standard and slope- intercept forms. • Graph a linear function (emphasize $y=$ in graphing calculator) <ul style="list-style-type: none"> ◦ Given rule (slope-intercept form and standard form - converting to slope-intercept), table of values ◦ Horizontal and Vertical Lines • Determine the equation of a line in slope-intercept form <ul style="list-style-type: none"> ◦ Given m and b, m and a point, two points, a graph, a table, equation in standard form, basic verbal representation • Matching and comparing between different representations of linear functions. • Create a linear function rule given a word problem. <ul style="list-style-type: none"> ◦ interpret the meaning of the components in the context of the problem. ◦ Solve for indicated inputs or outputs algebraically, graphically, or using a table. • Linear Regression <ul style="list-style-type: none"> ◦ Create and Interpret Scatter plots <ul style="list-style-type: none"> ■ Discuss causation vs. correlation ◦ Use the graphing calculator to determine equation of the line of best fit using linear regression. Identify and interpret correlation coefficient(Stat-Diagnostics). ◦ <i>*Residual plots</i> ◦ Use regression to determine equation of a line given two points or a table. • <i>* Introduction to Sequences</i> <ul style="list-style-type: none"> ◦ <i>Domain of sequences</i> ◦ <i>Sequence notation (include a_n and $f(n)$)</i> ◦ <i>Recursive Sequences</i> ◦ <i>Arithmetic Sequences</i> 	<ul style="list-style-type: none"> <input type="checkbox"/> Pre-Assessment Check <input type="checkbox"/> Performance Tasks <input type="checkbox"/> Quizzes <input type="checkbox"/> Castle Learning <input type="checkbox"/> Exit Tickets <input type="checkbox"/> Do Nows <input type="checkbox"/> Class Discussion <input type="checkbox"/> Daily Handouts <input type="checkbox"/> Unit Review and Re-engagement Activities <input type="checkbox"/> Unit Exam 	<p>EMathinstruction.com Unit #4 & Unit #10 McGraw Hill 2018 - Chapter 4, Chapter 5</p> <ul style="list-style-type: none"> • Jmap.org • Mathbits.com • Engageny.org • Bigideasmath.com • Problem Attic • Kuta Software • Castle Learning • Delta Math

		<ul style="list-style-type: none"> ■ Comparing the equivalent linear function rule to an arithmetic sequence in explicit form. ■ Determine the indicated term using the arithmetic sequence. <p><u>Linear Inequalities</u></p> <ul style="list-style-type: none"> ● Graph a linear inequality on the coordinate plane. ● Determine if a point is a solution to the inequality graphically and algebraically. ● Create a linear inequality from a word problem and state a possible solution. <p>Vocabulary: Line, Point, Slope, constant rate of change, initial value, y-intercept, x-intercept, dashed line, solid line, solution region, scatter plots, linear regression, correlation, correlation coefficient, strong, causal, Sequence, Recursive, Arithmetic, common difference, term,</p>		
<p>Marking Period 4</p>	<p>5 - Systems of Linear Equations and Inequalities</p> <p>Enduring Understanding:</p> <ul style="list-style-type: none"> ● Systems of linear equations can be used to model problems when there are multiple variables. ● Systems of equations can be solved by graphing, substitution, or eliminating a variable. <p>Essential Questions:</p> <ul style="list-style-type: none"> ● What does the number of solutions (none, one or infinite) of a system of linear equations represent? ● What are the advantages and disadvantages of solving a system of linear equations graphically versus algebraically? 	<p><u>Systems of Linear Equations</u></p> <ul style="list-style-type: none"> ● Define a system of equations and when we use them (solving for more than one unknown value) and interpreting the meaning of the solution. ● Identify types of linear systems: consistent (dependent -infinite solution vs. independent -unique solution) and inconsistent (no solution) ● Solve the system graphically and state the solution (intersection point) ● Solve the system from a table ● Solve the system algebraically (and checking) <ul style="list-style-type: none"> ○ Substitution ○ Elimination by addition ● Use the structure of the system to determine the best method for solving. ● Create a system of equations given a real world situation and solve. <ul style="list-style-type: none"> ○ Interpret the solution in the context of the problem. <p><u>Systems of Linear Inequalities</u></p> <ul style="list-style-type: none"> ● Solve a system of linear inequalities by graphing. Identify and indicate the solution region with an “S” or provided variable. ● Create a system of linear inequalities given a verbal situation and state a possible solution. <p>Vocabulary: System of equations, consistent, inconsistent, dependent, independent, Elimination, simultaneous, coincide, parallel lines, intersecting, at least, at most, the same as, viable</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Pre-Assessment Check <input type="checkbox"/> Performance Tasks <input type="checkbox"/> Quizzes <input type="checkbox"/> Castle Learning <input type="checkbox"/> Exit Tickets <input type="checkbox"/> Do Nows <input type="checkbox"/> Class Discussion <input type="checkbox"/> Daily Handouts <input type="checkbox"/> Unit Review and Re-engagement Activities <input type="checkbox"/> Unit Exam 	<p>EMathinstruction.com Unit #5 McGraw Hill 2018 - Chapter 6</p> <ul style="list-style-type: none"> ● Jmap.org ● Mathbits.com ● Engageny.org ● Bigideasmath.com ● Problem Attic ● Kuta Software ● Castle Learning ● Delta Math
