Superintendent of Schools

January 19, 2017

Dear Parents/Guardians:

This is to inform you that the District has now completed and received results on all initial water sampling. The final batch included 102 samples; lab results showed four faucets with results above the threshold of 15 ppb: two bathroom sinks at Upper Nyack Elementary, 1 bathroom sink in the men's visitor locker room at the High School and 1 classroom sink in room 203 at Valley Cottage Elementary. Upon receipt of the results, the faucets were immediately labeled as non-potable and taken out of service and remediated. I am pleased to report that the installation of new faucets in these four locations and subsequent testing has confirmed that water samples from these four faucets is now below the 15 ppb threshold. Accordingly, these faucets have been returned to service.

As a follow-up to my previous updates, we also received post-remediation test results for the six faucets in the Middle School bathrooms as well as the two faucets in High School Field House girl's locker room. All eight bathroom faucets have been remediated and subsequent testing confirms they are now below 15 ppb threshold. Water to these eight faucets has been turned on and the outlets are back in service.

We will keep you updated on any additional post-remediation test results.

Sincerely,

James J. Montesano, Ed.D.  
Superintendent of Schools

JJM:ld
