

ANIMAL SCIENCE

The Animal Science program is a full-time, four-year, career and technical high school housed at Voorhees High School (VHS) and on 75-acres of land located at Hunterdon County Educational Services Commission's (ESC) facility in Califon. The program utilizes a rigorous, highly focused curriculum for students with career interests in animal sciences. The coursework combines resources from Delaware Valley University and Harcum College, giving students the opportunity to earn college credits while in high school.

This model offers a unique and comprehensive hands-on approach to career and technical education. Students participate in structured learning experiences, such as internships and mentorships, that are relevant to their intended college and career pathways.
