

# Fun with Math Games & Activities

**-No electronics required!**

## Run a flashcard race.

Tape a series of flashcards to the floor and challenge kids to see who can correctly make their way from start to finish the fastest. They can call out the answers or write them down, but they have to get it right before they move on. Kids can race side by side or work independently to beat their own best time.

## Draw a colorful math facts garden

It's amazing how many math games you can play with sidewalk chalk! For this one, kids draw a basic flower with 10 numbered petals as shown. Then they write a number to multiply (or add or subtract) by in the middle, and fill in the petals with the correct answers.

## Bowl them over while learning math facts

Math games [using recycled materials](#) are economical and good for the environment. Set up empty plastic bottles labeled one through 10, then roll the ball to see how many you can knock down. Add up the numbers of the knocked-over bottles to get your score.
