K-2\textsuperscript{nd} Grade Art Activity

Created by Ms. Marini,
William B. Ward Elementary School
Let’s use lines and shapes that we already know to make something special!

(Note to K-2 Grade parents: depending on your child’s reading level, you may want to read them the directions of this project so that they have a better understanding of it. You may want to do this project with your kids. Adults have so much fun with our projects too!)
First, let’s review the lines that we need to know for this art project.

- Wavy
- Curvy
- "Toothy"
- Straight
Now, let’s review the shapes that we need to know.

- Triangle
- Square
- Rectangle
- Semi-circle
- Cloud shape
- Tree shape
For this art project, use **ANY** drawing material that you have in your house and lined or computer paper works great too. Start with pencil so that you can erase.

**ALSO,** be creative! It can look unique and special. It does not have to look like mine when you’re done.
Take it one step at a time! Feel free to change the house into an apartment building by adding a tall, skinny rectangle and lots and lots of windows.
We already learned how to draw clouds and trees. Do the best that you can!

Also, when you are making your house, get creative! Use other types of lines to fill in the roof top.
Congratulations! You made it to the last step. Have fun coloring your work of art in. If you don’t have coloring supplies at home, you can bring your artwork to school when we get back and finish it in Ms. Marini’s art class.

Remember that to make your art look extra special, you can trace the pencil lines with a dark color crayon or marker before you color inside the lines.
