4 Ways CatchOn Validates and Enhances 1:1 and Digital Learning Initiatives

An **ENA** Affiliate
catchon

Implementing a one-to one (1:1) device initiative for digital learning is a significant investment for any school district. It requires a well-crafted strategic vision for curriculum integration, a robust IT infrastructure, and training for faculty and students alike.

CatchOn, a data analytics and application monitoring tool designed specifically for education institutions, provides real-time insight into exactly what applications are being used on your new devices and can significantly improve instruction and help maximize your investments.

CatchOn enables you and your team to make data-informed decisions and optimize your district's EdTech usage.

Software Application Usage

CatchOn's revolutionary dashboard provides up-to-the-minute data on what online software and apps are trending across your district or building. With a few clicks, you can immediately get transparency into which apps are improving learning, how apps you have purchased are performing, as well as discover free and previously unknown apps.

Professional Development

CatchOn gives you detailed insight into which apps are being used and how often those apps are being accessed for learning. Underutilized apps may signal that your staff requires further training to properly incorporate them into the curriculum.

Discover Emerging Tools

CatchOn's Trending Apps tool can uncover powerful unknown apps being used in a school or district. As you review these unknown applications, you may discover effective tools to share with other teachers in the district.

Leveraging Devices to Their Full Potential

As a district, you have developed a clear vision for your 1:1 initiative. It is imperative that your significant investment positively impacts teaching and learning, but how do you know this is happening? At a glance, CatchOn takes you under the hood of your devices, informing you if your devices are being used for all you intended.
