

Chemistry Lesson

May 4-7 and May 11-14

Last week we did a webquest about science careers. This week we will extend this lesson on careers. Next year you will be SENIORS! After this exciting year you will be headed to college or out into the workforce, possibly with a plan and possibly without. I thought exploring your interest might be exciting. Your lesson for this week and next week will be to take a career cluster inventory survey. From this you will find two areas you are suited to. Be honest! Hopefully, your career path will coincide with the inventory. Follow the directions on the inventory and the final project will be a paper. You should do the inventory and begin research the week of May 4-7 and write the paper May 11-14. Have fun with this, but also use it to help find a career path. We will have a Zoom meeting on Tuesday May 5 at 10 am to discuss the work for this week and next.
