

6th, 7th & 8th Grade Mr. Naso Technology Parent Letter

Friday, March 13, 2020 10:06 AM

Dear Parent,

In the event of an extended school closure, it is expected that the students will shift their focus to working on their engineer report. We have been working on a solution to a long term problem all quarter long. We have been following the design process to generate our solutions. The last step of the Engineering Design Process is to Present Solution. During this stage the student present their solution to the class in an informal presentation to share their experiences. The presentation starts with initial design thoughts and then the group shares the challenges and design changes that happened while building their solution. The students have been working hard at completing all the necessary steps to have their solutions come to fruition. At this time we can capitalize on this opportunity to creating their documentation which is an essential skill for any engineer. The students have been working in a paperless environment all quarter long so the students would have access to their OneNote Notebook with a computer, tablet, phone if they have downloaded the app. It also can be accessed via the CCSD Office 365 login on the district webpage. If by any change you do not have access to these digital environments that a hand written paper copy will be fine.

See the assignment instructions for further details. Please email me if you have any further questions.

Stay safe,

Jeff Naso
