Grooming Equipment and Techniques

SWBOCES Animal Science
How to Give a Bath

Karen Becker gives a good overview and points to consider here. One of the most overlooked things to take away from this video is the cotton in the ears and general caution cleaning the face.
How to give put in Eye Ointment or Drops

One thing not covered in the bathing video is putting petroleum ointment in the dog's eyes prior to a bath that may involve soap or medicated shampoos around the eyes. These videos illustrate technique for safely placing ointments and drops.
Grooming Tools to Know:

If you have client’s dog in your care it an absolute must to know some basics about the use of grooming tools. You may also be a source of information for instructing new puppy owners how to keep their pups well cared for.
Comb

The comb is a basic tool to start off with for most grooming jobs and is very useful for detangling hair with the least amount of damage to the coat.
Slicker brush
Mat comb
Undercoat Rake
Shedding blade
Furminator

Be aware that it can damage the coat and skin. It is made using a clipper blade, so it actually will cut hair. There are many reviews complaining how this tool causes bald spots! Although this tool is not a favorite of mine, it is good to know what it is since many people do use these.
Thinning Shears
Straight and Curved Shears

Explaning Which Shear is Best for You

MY FAVORITE GROOMER!
Clipper Blades
Plier Nail Clippers

The guy in this video is so talented!!
Guillotine nail clippers
How to clean the ears

This guy is sooo good at what he does! OMG!!!
How to brush a dog's teeth:

Usually, a dog will not need its teeth brushed if the dog is an active chewer. Brushing teeth will help with the dogs that do not chew much for various reasons.

I like this guy’s haircut...
Puppy Massage

This is a basic exercise that can be done with pups and modified to a degree with older dogs to build tolerance to some of the more invasive grooming procedures.
